Notes to Consolidated Schedule of Investments (unaudited)

Investment Valuation— The most significant estimates made in the preparation of the financial statements of ArrowMark Financial Corp (“AMFC” or the “Company”). are the valuation of equity and debt investments and the effective yield calculation with respect to certain debt securities, as well as the related amounts of unrealized appreciation and depreciation of investments recorded. The Company believes that there is no single definitive method for determining fair value in good faith. As a result, determining fair value requires that judgment be applied to the specific facts and circumstances of each portfolio investment while employing a consistently applied valuation process for the types of investments that AMFC makes. The Company is required to specifically fair value each individual investment on a quarterly basis.

The Company complies with ASC 820-10, Fair Value Measurements and Disclosure, which establishes a three-level valuation hierarchy for disclosure of fair value measurements. ASC 820-10 clarified the definition of fair value and requires companies to expand their disclosure about the use of fair value to measure assets and liabilities in interim and annual periods subsequent to initial recognition. ASC 820-10 defines fair value as the price that would be received to sell an asset or paid to transfer a liability (i.e. the “exit price”) in an orderly transaction between market participants at the measurement date. ASC 820-10 also establishes the following three-tier fair value hierarchy:

- Level 1— Quoted prices in active markets for identical securities;
- Level 2 — Other significant observable inputs. These inputs may include quoted prices for the identical instrument on an active market, prices for similar instruments, interest rates, prepayment speeds, credit risk, yield curves, default rates, and similar data; and
- Level 3 — Significant unobservable inputs, including the Company’s own determinations about the assumptions that a market participant would use

in valuing the asset or liability, and that would be based on the best information available.

To the extent securities owned by the Company are actively traded and valuation adjustments are not applied, they are categorized in Level 1 of the fair value hierarchy. Securities traded on inactive markets or valued by reference to similar instruments are generally categorized in Level 2 of the fair value hierarchy.

The availability of valuation techniques and observable inputs can vary from security to security and is affected by a wide variety of factors including the type of security, whether the security is new and not yet established in the marketplace, and other characteristics particular to the transaction. To the extent that valuation is based on models or inputs that are less observable or unobservable in the market, the determination of fair value requires more judgement. Those estimated values do not necessarily represent the amounts that may be ultimately realized due to the occurrence of future circumstances that cannot be reasonably determined. Because of the inherent uncertainty of valuation, those estimated values may be materially higher or lower than the values that would have been used had a ready market for the securities existed. Accordingly, the degree of judgment exercised by AMFC in determining fair value is greatest for securities categorized in Level 3. In certain cases, the inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, for disclosure purposes, the level in the fair value hierarchy within which the fair value measurement in its entirety falls, is determined based on the lowest level input that is significant to the fair value measurement. The valuation levels are not necessarily an indication of the risk associated with investing in those securities.

Fair value is a market-based measure considered from the perspective of a market participant rather than an entity-specific measure. Therefore, even when market assumptions are not readily available, AMFC's own assumptions are set to reflect those that market participants would use in pricing the asset or liability at the measurement date. AMFC uses prices and inputs that are current as of the measurement date, including periods of market dislocation. In periods of market dislocation, the observability of prices and inputs may be reduced for many securities. This condition could cause a security to be reclassified to a lower level within the fair value hierarchy.

AMFC will determine fair value of its assets and liabilities in accordance with valuation procedures adopted by its Board of Directors. The Company may utilize the services of one or more regionally or nationally recognized independent valuation firms to help it determine the value of each investment for which a market price is not available. AMFC's Board of Directors will also review valuations of such investments provided by the Advisor. To the extent AMFC invests in securities for which market

quotations are readily available, such market value will be used to value those securities. If a market value cannot be obtained or if the Advisor determines that the value of a security as so obtained does not represent a fair value as of the measurement date (due to a significant development subsequent to the time its price is determined or otherwise), fair value shall be determined pursuant to the methodologies established by the Board of Directors. In making these determinations, the Company may engage an independent valuation firm from time to time to assist in determining the fair value of our investments. The methods for valuing these investments may include fundamental analysis, discounts from market prices of similar securities, purchase price of securities, subsequent private transactions in the security or related securities, or discounts applied to the nature and duration of restrictions on the disposition of the securities, as well as a combination of these and other factors.

The Company's assets measured at fair value subject to the disclosure requirements of ASC 820-10-35 at September 30, 2025, were as follows:

Written Options — The Fund is subject to equity and other risk exposure in the normal course of pursuing its investment objectives and may enter into options written to hedge against changes in interest rates, foreign exchange rates and values of equities. Such options may relate to particular securities or domestic stock indices, and may or may not be listed on a domestic securities exchange or issued by the Options Clearing Corporation. An option contract is a commitment that gives the purchaser of the contract the right, but not the obligation, to buy or sell an underlying asset at a specific price on or before a specified future date. On the other hand, the writer of an option contract is obligated, upon the exercise of the option, to buy or sell an underlying asset at a specific price on or before a specified future date. The maximum risk of loss associated with writing put options is limited to the exercised fair value of the option contract. The maximum risk of loss associated with writing call options is potentially unlimited. The Fund also has the additional risk of being unable to enter into a closing transaction at an acceptable price if a liquid secondary market does not exist. The Fund also may write over-the-counter options where completing the obligation depends upon the credit standing of the other party. Option contracts also involve the risk that they may result in loss due to unanticipated developments in market conditions or other causes. Written options are initially recorded as liabilities to the extent of premiums received and subsequently marked to market to reflect the current value of the option written. Gains or losses are realized when the option transaction expires or closes. When an option is exercised, the proceeds on sales for a written call option or the purchase cost for a written put option is adjusted by the amount of the premium received. Listed option contracts present minimal counterparty credit risk since they are exchange traded and the exchange's clearinghouse, as counterparty to all exchange-traded options, guarantees the options against default. The Fund's maximum risk of loss from counterparty credit risk related to OTC option contracts is limited to the premium paid.

For the nine months ended September 30, 2025, the Fund's quarterly average volume of derivatives is as follows:
